

## FOR IMMEDIATE RELEASE

15 January 2026

# ACCIONA's International Headquarters in Madrid - a new global benchmark in people-focused workplace design by Perkins&Will

*The international headquarters revitalizes a former 1970s corporate complex, focusing on well-being and ecological regeneration.*

**MADRID**—Global infrastructure and renewable energy leader ACCIONA's new international headquarters in Madrid has set a new standard in sustainable and hyperconnected workplace design. Located on a 10-hectare site in a central Madrid district, the workspace interiors were designed by interdisciplinary architecture and design firm Perkins&Will to reflect ACCIONA's commitment to sustainability, innovation, and well-being.

The project repurposed the site of a decades-old corporate campus, reviving the location with a verdant landscape and new facilities for 4,000 employees. The campus features three office buildings, including a new one designed by Fenwick Iribarren Architects with interiors by Perkins&Will, along with an auditorium and other amenities. Two of the original buildings underwent deep refurbishment, with Perkins&Will's interior designs creating light-filled, forward-thinking environments that work with the existing structure and materials.

The ACCIONA Campus reflects the company's commitment to sustainability, innovation, and people. Designed as a benchmark for the offices of the future, it brings together ACCIONA's global expertise in renewable energy and infrastructure to create a workplace that fosters collaboration, creativity, and well-being. The Campus integrates advanced technology and sustainable design to inspire employees to reach their full potential while contributing positively to both business and the planet.

*"By working with the grain of the existing structures and embracing natural elements, we've created a workspace that is both timeless and future-facing," says Perkin&Will Design Lead Mijail Gutierrez. ACCIONA wanted a workspace that exemplifies their values and mission, and we expressed this through serene and luminous aesthetic that celebrates light, shadow, air, and water and fosters a deep connection between employees, nature, and ACCIONA's mission to build a sustainable future."*

### Designing for well-being and connection

The campus prioritises human experience and cross-disciplinary collaboration, featuring flexible workspaces, coworking zones, and event areas that blend efficiency with hospitality. Interconnecting staircases and communal areas promote movement and spontaneous interaction, while external pavilions and terraces offer shaded retreats with fresh air and panoramic views. Dedicated zones for quiet reflection, optimised lighting with circadian rhythms, and enhanced acoustic and thermal comfort support mental clarity and physical vitality.

The interior design contrasts raw textures such as concrete, galvanised metals, and masonry with refined materials, harmonising old and new. A restrained palette of white, wood, and reflective surfaces references vernacular Spanish architecture, creating a serene and luminous atmosphere that celebrates the interplay of light and shadow. Architectural interventions bring daylight deep into the floor plates, minimising reliance on artificial lighting and enhancing visual comfort. Organic, sculptural forms set against the Iberian light create dramatic chiaroscuro moments, infusing the spaces with an ethereal yet warm ambience.

### Innovation and sustainability at every level

The campus meets the highest environmental standards, achieving LEED Platinum and WELL Platinum certifications while aligning with EU Taxonomy. It operates entirely on renewable electricity, with on-site solar PV, geothermal systems, and heat recovery technologies. Modular design allows for adaptability and waste reduction, locally sourced timber and antimicrobial

metals enhance sustainability, and ACCIONA's own low-carbon materials are featured prominently. Technological advancements include 3D-printed joinery, bespoke ceiling fans developed with ACCIONA's innovation lab, and robotics that support security and logistics.

## A regenerative landscape rooted in ecology

The landscape design, commissioned by ACCIONA, reflects a commitment to ecological restoration and employee well-being. Historic pine groves have been preserved and expanded, with 1,000 new trees and 20,000 shrubs planted. Native, climate-adapted species were prioritised to require minimal water. Rainwater reuse and greywater recycling systems support sustainable water management, while native meadows replace extensive lawns and improve soil health, reduce erosion, and unify the landscape. The result is a campus that not only enhances the well-being of its people but also regenerates the environment.

###

## Key project information

- Project name: Acciona Headquarters
- Address: Avenida de la Gran Vía de Hortaleza, 3, 28033 Madrid, Spain
- Project size: 400,000 sq ft / 37,162 sq m (Campus)
- Number of buildings: Three
- Building 6: 260,750 sqft
- Building 7: 208,013 sqft
- Building 9: 248,758 sqft
- Credentials: LEED Platinum, WELL Platinum
- Start date: September 2019
- Campus completion: March 2025
- Client/occupier: Acciona
- Architect/interior design: Perkins&Will (common areas, finishes, ceilings, WCs)
- Architect: Fenwick Iribarren Architects (shell and core for buildings 6, 7 & 9)
- Landscape architect & Landscaper: Gregorio Marañón

## About Perkins&Will

Perkins&Will, an interdisciplinary, research-based architecture and design firm, was founded in 1935 on the belief that design has the power to transform lives. The firm is committed to creating a better, beautiful, more equitable world through [Living Design](#), an approach that integrates environmental, social, and design considerations to advance ecological health and well-being. *Interior Design* named Perkins&Will a "Sustainability Giant" in 2024; *Architizer* named it the world's "Best Sustainable Firm" in 2023; and *Metropolis* named it "Firm of the Year" in 2022 for its industry leadership in advancing climate action and social justice. *Fast Company* named Perkins&Will one of the World's Most Innovative Companies in Architecture three times, and in 2021, it added the firm to its list of Brands That Matter—making Perkins&Will the first architecture practice in the world to earn the distinction.

With an international team of more than 2,500 professionals, Perkins&Will has over 30 studios worldwide, providing integrated services in architecture, interior design, branded environments, urban design, and landscape architecture. Partners include [Schmidt Hammer Lassen Architects](#); [McLennan Design](#); [Portland](#); [Nelson\Nygaard](#); and [Pierre-Yves Rochon](#) (PYR). ## About Perkins&Will's London Studio

The London team works from its self-designed, self-built studio at 150 Holborn in the Midtown area of the city. Co-creation and social connectivity were central principles in the design of 150 Holborn and as a hub of collaboration, the London studio recognises that the combined knowledge and expertise of multiple design disciplines enables projects that are holistically responsive in both approach and delivery.

Led by Jo Wright, the studio's award-winning areas of practice span Corporate and Commercial, Health, Higher Education, K-12 Education, Science and Technology, Workplace Consultancy, and Urban Design sectors.
